# Bandag R168+(E) Trailer Regional - Highway

## Excellent mileage performance

Up to 5% more than BTR-WB (E).

## Great resistance to irregular wear

thanks to the application of Bridgestone technologies.

## Like-new appearance

Great product appearance thanks to the Bandag ECL curved section.

### The Bandag regional trailer challenge

Trailer tyres have a hard life. They are often exposed to continuously changing load and rough operating conditions like short turns. Moreover trucks dedicated to regional transport need to cope with a large scale of operations, from highway to light On/Off operations.

The R168+(E) treads are designed for a perfect fit with Bridgestone and other premium brand casings. They are now available in sizes 285, 295, 305, 320 and 330, allowing to retread the most common casing sizes used within this segment.

### The most complete trailer treads line-up

Together with the introduction of the new BTR-WB (E), we now offer you a full range of Bridgestone and Application Specific trailer patterns, each delivering specific advantages:

- R168+(E) and BTR-WB (E) for superior mileage in regional applications
- R109 Ecopia for low rolling resistance
- BTR-WB for balanced performance in versatile conditions
