

# ***Tough shoulders by Bandag***

***The new BTR-WB (E)***

## ***Top performance under all circumstances.***

What's the most vulnerable part of a 3-axle trailer tyre? That's right: the shoulders, because of the heavy scrubbing that occurs in short turns. The shoulders of the new Bandag Trailer Regional – Wide Base have been designed to withstand even the toughest conditions. The new-generation ECL tread platform optimizes reliability and provides the BTR-WB (E) with a fantastic new-tyre appearance. Add the superior compound and the result is a product that combines top mileage performance and reliability under all circumstances.

***NO DETOURS.™***
